CASE STUDY: AYLESBURY CAMPUS

Buckinghamshire College Group

We recently helped one client prevent 540 single-use plastic bottles from ending up in landfill each year – and because there's no need for constant deliveries, they also eliminated 0.170 tonnes of CO2 emissions per year!

Aylesbury Campus, a part of the Buckinghamshire College Group, were recently approached by Ozoklenz to review their cleaning processes to see how they could lessen their carbon footprint by reducing the need of deliveries of chemicals, and so they could improve the environment and air quality at work. They wanted a truly sustainable option and expressed their interest in Ozoklenz as it they were intrigued by its power being 30x that of bleach without needing any COSHH requirements. It seemed too good to be true that they could eliminate their chemicals and just use Ozoklenz a naturally made product, so they requested a trial to see how it performed. The cleaners found it

worked outstandingly on glass and stainless steel as well as general surfaces round the college building. We carried out ATP testing for them too on various surfaces from the glass doors to door handles and classroom accessories and the results showed it to be cleaning effectively too. Aylesbury College trialled Ozoklenz for over one month and the cleaning supervisor confirmed they were happy with it and it was performing as they required without the need of chemicals. The college was delighted to acquire the unit to help them on their journey of sustainability and improving cleaning at work. This means they will eliminate 100s of plastic bottles each year and reduce deliveries too.

“The proof is in the results, it does exactly what was promised. We are now putting Ozoklenz in a further two sites and the opinions of our housekeeping team has totally changed now that the college is clean!”

- Soft Service Facilites Manager

ATP TESTING RESULTS

Location	Pre-Clean	After Clean
Glass Vision Door	608 - FAIL	0 - PASS
Door Handle	181 - FAIL	0 - PASS
Mouse - Classroom	129 - FAIL	4 - PASS
Toilet Sink Surface	61 - FAIL	5 - PASS
Toilet Surface	51 - CAUTION	12 - PASS

UNIT DETAILS:

Name:	Ozoklenz ECO1
Flow Rate:	11 Litres per Minute
Concentration:	1.5 PPM of Ozone in solution

KIND TO YOUR WORKPLACE

Workplaces using green cleaning solutions have been shown in studies to report happier, healthier and more productive staff – this is thanks to improved air quality and less use of chemicals that are detrimental to human health.

KIND TO OUR PLANET

Because our cleaning solution is produced on site in the ozoklenz unit – using just electricity, O₂ and mains water – it does away with the need for multiple plastic cleaning bottles that end up in landfill.

After 4 hours, the effectiveness of the solution as sanitiser gradually reduces, allowing any leftover solution to be poured away safely

KIND TO YOUR BUDGET

Having the ozoklenz unit installed at your workplace is kind on your cleaning budget.

There are no ongoing costs associated with producing aqueous ozone – and you won't need to buy replacement cartridges or additional cleaning products.

For each Ozoklenz unit purchased, we will plant 50 trees. This is equivalent to 7.5 tonnes of CO₂ removed from the atmosphere over the trees lifespan.

READY FOR MORE?

One of our favourite things to do is visit potential new clients and discuss our powerful, planet-friendly cleaning solution. We're always on hand to help and chat, too.
